People are living longer.

More people are living in their family homes and wish to maintain their independence as long as possible. We recognize there is a need for user friendly, safe homes for individuals approaching their retirement years, or those with mobility challenges.

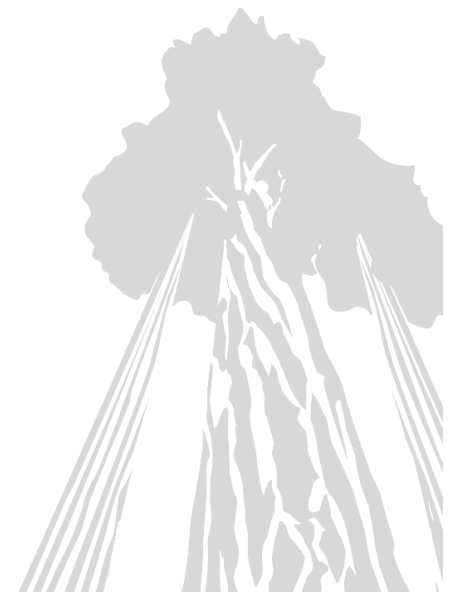

We design homes for exclusive one level living.

Our homes feature easy home access, open and luxurious entertaining spaces with a gourmet kitchen, charming master bedroom, and laundry facilities all on one floor. We will carefully consider your need for RV parking, plenty of storage, and some space for the visiting grandkids!

Finally, a place to move in and stay.

The homes we design and build have options for future accessibility improvements. Spacious kitchens, wider hallways, backing in washrooms for future bars. These small but important touches will allow for long term living in the place you call home.
